Master's thesis

Namn Willy Själin
E-mail willys@cs.umu.se

Week 1

The first week of the thesis project began with getting introduced to the office and receiving a laptop that I could work on. I had the project specification finished before the course start, but the research questions were very vaguely stated and the AI-techniques was not even mentioned due to time had to be spent on the exams prior to the thesis course. I set up the repository, installed the necessary programs and began with the Gantt-chart. The majority of time spent on week 1 was to get familiar with the Eiffel-framework which is one of the most central part of the project. I mailed my internal supervisor and we are gonna have a meeting in the near future to talk about the uncertainties of the specification.
